

# The MuSK Myasthenia 1000 Study

## What is the MuSK Myasthenia 1000?

A study seeking to collect saliva samples from patients with MuSK Myasthenia to learn more about the disease.

Collected data and samples (without identifying information) will be used to explore connection between genes that may put people at risk for MuSK Myasthenia Gravis (MG)

\*Participants will receive small compensation.

## What is the goal of the study?

To discover more about MuSK MG to be able to develop better treatments for MuSK MG patients.

## Who is involved in this study?

This study is run at the George Washington University, the lead site of The National Institute of Health's Rare Disease Clinical Research Myasthenia Gravis Network (MG Net).

## Eligibility:

- Provide lab result of MuSK MG diagnosis
- Sign consent form
- Be willing to submit saliva sample kit within 5 days of receipt

## To participate:

- Contact study team via phone, or email
- OR**
- Mail this card with your contact information and study team will reach out to you.
